

INTEGRATED MANAGEMENT SYSTEM POLICY

At Distiller S.A. Our main objective is to maximize the reuse of materials already used by other industries in a safe way and in accordance with both the environment and current regulations. To steer the company in this direction, we have established a series of policies that seek to support the actions carried out for the purpose described.

We frame the reuse of materials within the environmental hierarchy of waste. Thus, we prioritize, in the first place, the material recovery by putting products obtained from the plant treatments back on the market, and secondly, the energy recovery, using the calorific power of the materials we manage. In this way, we manage to prevent pollution and minimize our impact on the environment by generating the least amount of waste possible and consuming the least amount of energy possible, thus protecting the environment.

Due the nature of the products that we deal with and the facilities we need, we give primary importance to safety in our operations. On the one hand, it is essential that we know in depth the materials we receive, for which we make sure both to obtain the maximum possible information from the client and to analyze all the waste that enters our facilities in our laboratories. On the other hand, we carry out periodic controls and inspections of our facilities, as well as we have a strong investment policy for the renewal of equipment.

In order to guarantee the explained commitment, at Distiller S.A. We firmly believe that the differential value is configured by the people who make up the workforce of each of the work centers. We understand that the growth and good work of the company can only go hand in hand with the professional and personal growth of the staff, so year after year, we plan the necessary and complementary training for the different work teams. Environmental awareness and awareness is essential to be able to involve all staff in our commitment.

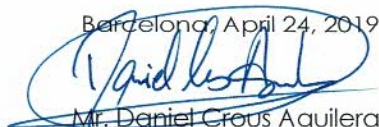

Distiller undertakes to comply with the applicable requirements of the interested parties, taking into account that the sector of activity in which Distiller SA is located, is developed within a strongly regulated framework. Knowledge of and compliance with current legislation, both in terms of the environment and transport, is a basic aspect of our day-to-day life, which is why it is necessary both to have personnel trained in these areas and to have specialized collaborators.

All of this would not be possible without our fixation on providing the best service on the market. We understand communication with our clients as something fundamental, so we force ourselves to have total transparency about our operations and provide all the information about our services, our treatments and our sales products. We also offer them advice to improve the environmental impact of their facilities.

We work with suppliers and subcontractors as if they were the company's own personnel. We previously evaluate them, and as we work with them, we verify that they meet the established goals. We must have constant and direct communication with them, indicating how they should apply our policy during their stay in the company.

The company periodically defines a series of environmental and quality objectives and goals that are adjusted to current needs, taking into account its interaction with the environment and with the rest of society. Controlling and parameterizing current activity is the basis for the constant research we carry out to improve our processes and to recover new substances. This communion allows us to stay in a situation of constant improvement.

Barcelona, April 24, 2019

Mr. Daniel Crous Aguilera

CEO of Distiller S.A.U
